This film cover can reduce viruses and bacteria simply by wrapping it around door handles and handrails!

Note: This product is not intended for the purpose of treating or preventing illness.

Features of the Cufitec® Film Cover

Point 1
The anti-viral and anti-bacterial effects last for around 6 months.

Point 2
The film is transparent and not noticeable when it is applied.

Point 3
Surfaces can be cleaned while the film is applied.

The Cufitec® Film Cover can control the spread of viruses and bacteria from door handles and handrails with its anti-viral and anti-bacterial performance.
Advantages

How to use effectively
Replace approximately every 6 months.

1. Peel off the backing paper of the double sided tape from the side which does not have the perforation marks.
2. Apply the adhesive side straight and wrap the cover around the surface.
3. Peel off the remaining backing paper from the double-sided tape, and seal the adhesive surface to fasten the cover in place.

Regular cleaning is possible while the cover is applied.

- Disinfecting alcohol can be used.
- Sodium hypochlorite (up to 200 ppm) can be used.
- Class 4 quaternary ammonium can be used.

Note: Use only substances which do not contain isopropyl alcohol.

Situations of use

Can be used on the objects that many people touch such as door handles and handrails, buttons as a countermeasure against viruses and bacteria.

- Door handles
- Handrails
- EV Buttons
