Wiping cloth

Prevents cloths from spreading viruses and bacteria. Unlike an ordinary cloth, these cloths do not become hot beds for viruses and bacteria.

Features of the Wipingcloth

Point 1
Viruses are firmly trapped on the surface of the cloth, reducing the numbers of specific viruses.

Point 2
The powerful anti-bacterial effects reduce the growth of bacteria and prevent unpleasant odors.

Point 3
The anti-viral and anti-bacterial performance continues even after repeated washing. The cloths can be used around 30 times when hand-washed with water or a neutral detergent, or around 10 times when washed with laundry detergent in a washing machine.

Point 4
Japanese-made high quality and reliability. From material selection to processing, all manufacturing process are performed in Japan.

Point 5
Acquired SEK mark certification for Antiviral Finished Product, Antibacterial Finished Product, and Antimicrobial Finished Product.
In nursing care facilities, kitchens, and other places

Situations of use

In nursing care facilities, kitchens, and other places

Use for cleaning tables, counters, and similar surfaces. Because these wiping cloths do not spread viruses and bacteria, they can be safely used in locations where food is handled.

Advantages

Ordinary

When wiping tables and other surfaces, there is the risk that the cloth may spread viruses and bacteria.

Cufitec®

Because Cufitec® reduces the numbers of viruses on the cloth surface, and inhibits bacteria growth, it prevents the cloth from becoming a hot bed for viruses and bacteria that spreads them as it is used.
